FOR IMMEDIATE RELEASE
July 14, 2008

COAST AND GMF FLEXO OPEN KODAK FLEXCEL NX DEMO SITE

Coast Paper and **GMF Flexo Prepress Inc.** are pleased to announce the installation of a complete **Kodak Flexcel NX** system at the GMF Flexo facility in Mississauga. The site includes the installation of a Kodak Trendsetter NX and laminator for plate production.

The Kodak Flexcel technology is a break-through process that enables "offset-like" quality on an ordinary flexo press, as seen at both INFOFlex and Drupa this past year. A unique Thermal Imaging Layer supports the creation of true size dot reproduction as small as 10 microns.

"GMF is excited to participate in the launch of the Kodak NX Technology in partnership with Coast Paper," says Greg Platt, President of GMF Flexo. "We are looking forward to exceeding the present-day flexography limits and producing world class packaging that rivals roto-gravure and offset lithography."

"Coast believes that the Kodak Flexcel NX system will allow our Canadian flexo printers a real competitive advantage against all other package print technologies," agrees Ed Gamelin, General Manager of Coast Paper Toronto.

Coast is a specialist in the sales, marketing and distribution of fine paper and graphic systems solutions, as well as industrial products. Coast's growing flexographic portfolio includes Kodak plate technology and consumables, Mekrom platemaking systems, Hostmann-Steinberg inks, and Tesa Tapes.

GMF Flexo Prepress is a firm specializing in graphic communications and pre-press services.
